There are many variables involved in properly designing a fiber optic installation.

Give us a drawing with details:

1. Pool & deck size
2. House location
3. Pool interior surface color
4. Light generator should be **NO** more than 10' from pool

REMEMBER: This is mood & accent lighting. If safety is an issue, standard pool lights should also be installed.

IntelliFlo™ VS+SVRS

Intelligent Variable Speed Pump + Safety Vacuum Release System

- * Meets ASME A112.19.17.2002 Standards
- * Onboard intelligence detects blockage and automatically shuts pump off within seconds
- * Exclusive breakthrough motor technology provides energy savings while being safety compliant
- * SVRS protection cannot be turned off
- * Safety lock-out feature (password protected) prevents pump speed settings from being changed by unauthorized personnel
- * NSF certified and UL and ETL Listed
- * 8 settable, changeable speeds ranging from 1100 to 3450 RPMs
- * No SVRS calibration required; the blockage detection/shut down function is pre-programmed
- * If the SVRS becomes disabled, the pump will not run

Safety Vacuum Release System-----SVRS

- * Meets ASME A112.19.17.2002 Standards
- * Full body entrapment release protection
- * Motors available up to 3 HP
- * **Also** provides protection against extreme voltage variation, jammed impeller or blocked/dirty filter

Easy Installation:

- * Installs just like a standard pool motor
- * Self calibrates, no field calibration
- * Achieve a better pump system by simply replacing the motor

Standard Features

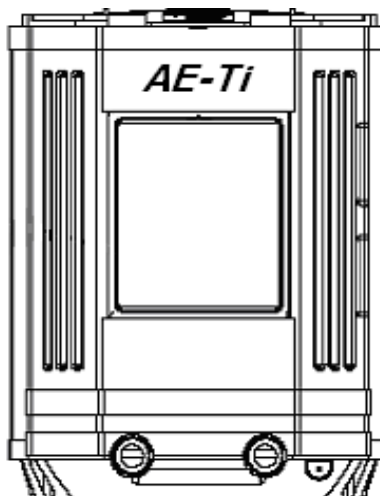

- * Digital control panel displays pool temperature and monitors operating status of the unit
- * Titanium Heat Exchanger not affected by aggressive water chemistry
- * Commercial grade Scroll type compressor
- * *Auto Heat* maintains pool temperature 24 hours a day, overriding the pool time clock

FUEL TYPE	COST PER UNIT	BTU's / 1¢
Electric	.075 / Kwh	455
LP gas	.99 / Gal	653
Oil	.99 / Gal	979
Natural gas	.65 / therm	1077
HEAT PUMP	.075 /Kwh	2093

WHY A HEAT PUMP?

- * Uses heat in the air
- * Delivers \$4-\$7 of heat for each \$1 of energy used
- * 500%-600% efficient vs. 80-85% for gas heaters
- * Very little maintenance
- * No gas lines to run
- * No LP tanks to buy
- * 15-20 year life
- * Safer---NO GAS!
- * No pilot lighting
- * Clean emissions
- * Odorless operation

HOW DOES IT WORK?

- * Uses Nature's warm air to heat liquid freon and turn it into gas
- * Warm gas compressed into *hot* gas
- * Hot gas flows into the heat exchanger & releases heat to flowing water

A paint job is only as good as the surface preparation. You want it so clean you could "eat off of it".

Step #1---Clean the pool surface with #910 *Pool Wash* to break down oils and dirt left on the surface...
rinse...pump out the rinse water.

Step #2---Acid wash surface with a 2:1, water to muriatic acid...rinse...pump out acid solution carefully.

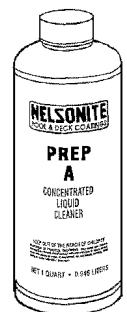

Step #3---Repeat Step #1...allow surface to dry and reach proper temperature before applying paint.

OR DO IT THE EASY WAY!

Step #1---Mix PREP A according to directions (PREP A + water + acid)...apply to surface...rinse...pump out.

Step #2---Allow surface to dry and reach proper temperature before applying paint.

See page 59 for "PREP A"
